

Vue Uploader – Step 1

- Upload end extract to web host or server or localhost
- Edit php.ini and time and upload settings
- Edit App URL and max file size and allowed formats in Upload.php (in line 14 and 15 and 57)

```
14      1reference  
      private $allowedTypes = array('jpg', 'jpeg', 'png', 'gif', 'mp4');  
      1reference  
15      private $maxSize = 1048576000000000000;  
      2references
```

```
56      if ($_SERVER['REQUEST_METHOD'] === 'POST') {  
57          $uploader = new FileUploader("http://localhost:8000");  
58      }
```

Step 2

- Edit website texts and title
- Edit max file size and allowed formats in index.html (in line 86 and 99)

```
84     methods: {
85         checkFileSize() {
86             const maxSize = 8388608; // 8MB
87             const fileSize = this.$refs.fileInput.files[0].size;
88             if (fileSize > maxSize) {
89                 const maxSizeInMB = maxSize / 1024 / 1024;
90                 this.uploadError = 'File size exceeds the maximum allowed limit of ' +
91                     maxSizeInMB + ' MB';
92                 this.fileUrl = null;
93                 return;
94             }
95             this.uploadError = null;
96             this.uploadFile();
97         },
98         uploadFile() {
99             this.file = this.$refs.fileInput.files[0];
100             const allowedFormats = ['jpg', 'jpeg', 'png', 'gif', 'mp4'];
101             const fileFormat = this.file.name.split('.').pop().toLowerCase();
102             if (!allowedFormats.includes(fileFormat)) {
103                 this.uploadError = 'Invalid file format. Allowed formats are: ' +
104                     allowedFormats.join(', ');
105                 this.fileUrl = null;
106                 return;
107             }
108         }
109     }
110 }
```
